

Oracle® Fusion Middleware

Installing Oracle GoldenGate Studio

12c (12.2.1.1)

E72770-01

June 2016

Documentation for installers and system administrators that describes how to install Oracle GoldenGate Studio.

Preface

This document describes how to install Oracle GoldenGate Studio.

[Audience](#)

[Documentation Accessibility](#)

[Related Documents](#)

[Conventions](#)

Audience

This document is intended for system administrators or application developers who are installing Oracle GoldenGate Studio. It is assumed that readers have a general understanding of Windows and UNIX platforms.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Related Documents

For more information, see the following documents in the 12c documentation set:

- *Planning an Installation of Oracle Fusion Middleware*
- *Using Oracle GoldenGate Studio*
- *Installing and Configuring Oracle GoldenGate for Oracle Database*

Conventions

The following text conventions are used in this document:

Convention	Meaning
boldface	Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.
<i>italic</i>	Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.

Preparing to Install Oracle GoldenGate Studio

To prepare for your Oracle GoldenGate Studio installation, verify that your system meets the basic requirements. Then obtain the correct installation software.

[Roadmap for Installing Oracle GoldenGate Studio](#)

This roadmap has all the steps required to install Oracle GoldenGate Studio.

[Roadmap for Verifying Your System Environment](#)

You must read and understand the important information in this roadmap before you begin the installation process.

[Obtaining the Product Distribution](#)

You install Oracle GoldenGate Studio using the Oracle Fusion Middleware GoldenGate Studio distribution.

1.1 Roadmap for Installing Oracle GoldenGate Studio

This roadmap has all the steps required to install Oracle GoldenGate Studio.

Table 1-1 Standard Installation Roadmap

Task	Description	Documentation
Verify your system environment	Before beginning the installation, verify that the minimum system and network requirements are met.	See Roadmap for Verifying Your System Environment .
Check for any mandatory patches that will be required before or after the installation	Review the Oracle Fusion Middleware Infrastructure release notes to see if there are any mandatory patches required for the software products you are installing.	See Install and Configure in <i>Release Notes for Oracle Fusion Middleware Infrastructure</i> .
Obtain the appropriate distribution	Obtain the Oracle GoldenGate Studio distribution.	See Obtaining the Product Distribution .

Table 1-1 (Cont.) Standard Installation Roadmap

Task	Description	Documentation
Determine your installation directories	Verify that the installer can access or create the installer directories that it must access or create. Also, verify that the directories exist on systems that meet the minimum requirements. Note: Oracle does not recommend installing the Oracle GoldenGate Studio binaries on a NFS mounted file system.	See What are the Key Oracle Fusion Middleware Directories? in <i>Understanding Oracle Fusion Middleware</i> .
Install the software	Run the Oracle Universal Installer to install Oracle GoldenGate Studio. Installing the software transfers the software to your system and creates the Oracle home directory.	See Installing the Oracle GoldenGate Studio Software .
Create the Oracle GoldenGate Studio Repository schema.	Run the Repository Creation Utility to create the Oracle GoldenGate Studio Repository schema.	See Creating the Oracle GoldenGate Studio Repository Schema .
Start and use Oracle GoldenGate Studio.	Discover additional tools and resources to use Oracle GoldenGate Studio.	See Next Steps After Installing Oracle GoldenGate Studio .

1.2 Roadmap for Verifying Your System Environment

You must read and understand the important information in this roadmap before you begin the installation process.

[Table 1-2](#) identifies important tasks and checks to perform to ensure that your environment is properly prepared for installing Oracle GoldenGate Studio.

Table 1-2 Roadmap for Verifying Your System Environment

Task	Description	Documentation
Verify certification and system requirements	Verify that your operating system is certified and properly configured for installation and configuration.	See Verifying Certification, System Requirements, and Interoperability .
Identify a proper installation user	Verify that the installation user has the proper permissions to install the software.	See Selecting an Installation User .
Select the Oracle home directory on your system.	Verify that you can create the necessary Oracle home directory for installation, according to the recommended directory structure. Oracle GoldenGate Studio is a standalone installation. The Oracle home directory should be a new, empty directory.	See About the Oracle Home Directory .

Table 1-2 (Cont.) Roadmap for Verifying Your System Environment

Task	Description	Documentation
Install a certified JDK	The installation program for the distribution requires a certified JDK present on your system.	See Understanding JDK Requirements for an Oracle Fusion Middleware Installation .
Install and configure a database for mid-tier schemas	You must have access to a certified database that is properly configured for schemas required by Oracle GoldenGate Studio.	See Understanding Database Requirements for an Oracle Fusion Middleware Installation .

[Verifying Certification, System Requirements, and Interoperability](#)

Oracle recommends that you use the certification matrix and system requirements documents with each other to verify that your environment meets the requirements for installation.

[Selecting an Installation User](#)

The user who performs installation and configuration on your system requires sufficient permissions and privileges.

[About the Oracle Home Directory](#)

When you install any Oracle Fusion Middleware product, you must use an Oracle home directory.

[Understanding JDK Requirements for an Oracle Fusion Middleware Installation](#)

Most Fusion Middleware products are in .jar file format. These distributions do *not* include a JDK. To run a .jar distribution installer, you must have a certified JDK already installed on your system.

[Understanding Database Requirements for an Oracle Fusion Middleware Installation](#)

Many Oracle Fusion Middleware products require database schemas prior to configuration. If you do not already have a database where you can install these schemas, you must install and configure a certified database.

1.2.1 Verifying Certification, System Requirements, and Interoperability

Oracle recommends that you use the certification matrix and system requirements documents with each other to verify that your environment meets the requirements for installation.

1. Verifying your environment meets certification requirements

Make sure that you are installing your product on a supported hardware and software configuration. For more information, see the certification document for your release on the *Oracle Fusion Middleware Supported System Configurations* page.

Oracle has tested and verified the performance of your product on all certified systems and environments. Whenever new certifications occur, they are added to the proper certification document right away. New certifications can be released at any time. Therefore, the certification documents are kept outside the documentation libraries and are available on Oracle Technology Network.

2. Using the system requirements document to verify certification

Oracle recommends that you use the *Oracle Fusion Middleware System Requirements and Specifications* document to verify that the certification requirements are met. For example, if the certification document indicates that your product is certified for installation on 64-Bit Oracle Linux 6.5, use this document to verify that your system meets the required minimum specifications. These include disk space, available memory, specific platform packages and patches, and other operating system-specific items. System requirements can change in the future. Therefore, the system requirement documents are kept outside of the documentation libraries and are available on Oracle Technology Network.

3. Verifying interoperability among multiple products

Read *Understanding Interoperability and Compatibility* to learn how to install and run multiple Fusion Middleware products from the same release or mixed releases with each other.

1.2.2 Selecting an Installation User

The user who performs installation and configuration on your system requires sufficient permissions and privileges.

[Understanding User Permissions](#)

The user who installs a Fusion Middleware product owns the files and has certain permissions on the files.

[Understanding Non-Default User Permissions on UNIX Operating Systems](#)

Changing the default permissions setting reduces the security of the installation and possibly your system. Oracle does not recommend changing default permission settings.

[Verifying the Installation User has Administrator Privileges on Windows Operating Systems](#)

To update the Windows Registry, you must have Administrator privileges.

1.2.2.1 Understanding User Permissions

The user who installs a Fusion Middleware product owns the files and has certain permissions on the files.

The user who installs a Fusion Middleware product has the following permissions on them:

- Read and write permissions on all non-executable files (for example, `.jar`, `.properties`, or `.xml`). All other users in the same group as the file owner have read permissions only.
- Read, write, and execute permissions on all executable files (for example, `.exe`, `.sh`, or `.cmd`). All other users in the same group as the file owner have read and execute permissions only.

This means that someone other than the person who installs the software can use the installed binaries in the Oracle home to configure a domain or set of Fusion Middleware products.

Below are some additional considerations to make prior to running the installer:

- On UNIX operating systems, Oracle recommends that you set the `umask` to `027` on your system prior to installation. This ensures that file permissions are set properly during installation. Use the following command:

```
umask 027
```

You must enter this command in the same terminal window from which you plan to run the product installer.

- On UNIX operating systems, do not run the installation program as the `root` user. The installer startup validation will fail and you will not be able to continue.
- When managing a product installation (for example, applying patches), you must use the same user ID as was used to perform the initial product installation.
- On Windows operating systems, the user performing the installation must have Administrator privileges. See [Verifying the Installation User has Administrator Privileges on Windows Operating Systems](#) for more information.

1.2.2.2 Understanding Non-Default User Permissions on UNIX Operating Systems

Changing the default permissions setting reduces the security of the installation and possibly your system. Oracle does not recommend changing default permission settings.

If other users require access to particular files or executable, consider using the UNIX `sudo` command (or other similar command) in lieu of changing file permissions.

Refer to your UNIX operating system Administrator's Guide or contact your operating system vendor if you need further assistance.

1.2.2.3 Verifying the Installation User has Administrator Privileges on Windows Operating Systems

To update the Windows Registry, you must have Administrator privileges.

By default, members with the Administrator privilege sign in to the system with regular privileges, but can request elevated permissions to perform administrative tasks.

To perform a task with elevated privileges:

1. Find the Command Prompt item, either from the Start menu or the Windows icon in the lower-left hand corner.
2. Right-click Command Prompt and select **Run as administrator**.

This opens a new command prompt window, and all actions performed in this window will be done with administrator privileges.

Note: If you have User Access Control enabled on your system, you may see an additional window asking you to confirm this action. Confirm and continue with this procedure.

3. Perform the desired task.

For example, to start the product installer:

For a jar file, enter:

```
java -jar distribution_name.jar
```

For an executable (.exe, .bin, or .sh file), enter:

`distribution_name.exe`

1.2.3 About the Oracle Home Directory

When you install any Oracle Fusion Middleware product, you must use an Oracle home directory.

This directory is a repository for common files that are used by multiple Fusion Middleware products installed on the same machine. These files are essential to ensuring that Fusion Middleware operates correctly on your system. They facilitate checking of cross-product dependencies during installation. For this reason, you can consider the Oracle home directory a *central support directory* for all Oracle Fusion Middleware products installed on your system.

Fusion Middleware documentation refers to the Oracle home directory as `ORACLE_HOME`.

Oracle Home Considerations

Keep the following in mind when creating the Oracle home directory and installing Fusion Middleware products:

- Do not include spaces in the name of your Oracle home directory; the installer gives you an error message if your Oracle home directory path contains spaces.
- You can install only one instance of each Oracle Fusion Middleware product in a single Oracle home directory. If you need to maintain separate versions of a product on the same machine, each version must be in its own Oracle home directory.

Although you can have several different products in a single Oracle home, only one version of each product can be in the Oracle home.

Multiple Home Directories

Although in most situations, a single Oracle home directory is sufficient, it is possible to create more than one Oracle home directory. For example, you need to maintain multiple Oracle home directories in the following situations:

- You prefer to maintain separate development and production environments, with a separate product stack for each. With two directories, you can update your development environment without modifying the production environment until you are ready to do so.
- You want to maintain two different versions of a Fusion Middleware product at the same time. For example, you may want to install a new version of a product while keeping your existing version intact. In this case, you must install each product version in its own Oracle home directory.
- You need to install multiple products that are not compatible with each other. See *Understanding Interoperability and Compatibility* for more information.

Note: If you create more than one Oracle home directory, you must provide non-overlapping port ranges during the configuration phase for each product.

1.2.4 Understanding JDK Requirements for an Oracle Fusion Middleware Installation

Most Fusion Middleware products are in . jar file format. These distributions do *not* include a JDK. To run a . jar distribution installer, you must have a certified JDK already installed on your system.

Make sure that the JDK is installed *outside* of the Oracle home. If you install the JDK under the Oracle home, you will encounter problems when you try to perform tasks in the future. Oracle Universal Installer validates that the Oracle home directory is empty; the install will not progress until you specify an empty directory. Oracle recommends that you locate your JDK installation in the /home/oracle/products/jdk directory.

Some products (such as Oracle HTTP Server and Oracle JDeveloper) are available as **platform-specific distributions**. Platform-specific distributions have a .bin (for UNIX operating systems) or .exe (for Windows operating systems) installer; in these cases, a platform-specific JDK is in the distribution and you do not need to install a JDK separately. However, you may need to upgrade this JDK to a more recent version, depending on the JDK versions that are certified.

Always verify the required JDK version by reviewing the certification information on the *Oracle Fusion Middleware Supported System Configurations* page.

To download the required JDK, navigate to the following URL and download the Java SE JDK:

<http://www.oracle.com/technetwork/java/javase/downloads/index.html>

1.2.5 Understanding Database Requirements for an Oracle Fusion Middleware Installation

Many Oracle Fusion Middleware products require database schemas prior to configuration. If you do not already have a database where you can install these schemas, you must install and configure a certified database.

To find a certified database for your operating system, see the certification document for your release on the *Oracle Fusion Middleware Supported System Configurations* page.

To make sure your database is properly configured for schema creation, see "Verifying Requirements for Oracle Repository Creation Utility" in the *Oracle Fusion Middleware System Requirements and Specifications* document.

Note:

For 12c, only a certified Oracle database can be used for the Oracle Fusion Middleware Infrastructure standard installation topology.

After your database is properly configured, you use the Repository Creation Utility (RCU) to create product schemas in your database. This tool is available in the Oracle home for your Oracle Fusion Middleware product. For more information about RCU, see *Creating Schemas with the Repository Creation Utility*.

1.3 Obtaining the Product Distribution

You install Oracle GoldenGate Studio using the Oracle Fusion Middleware GoldenGate Studio distribution.

You can obtain the distribution for Oracle GoldenGate Studio from the Oracle Technology Network (OTN). To install Oracle GoldenGate Studio, download and unzip the installer ZIP file to a directory on your system. You can then run the `java -jar` command from that directory to start the installer.

To locate and download Oracle Fusion Middleware products, see *Oracle Fusion Middleware Download, Installation, and Configuration Readme Files* on OTN.

You must have a certified JDK installed on your system to install this distribution.

Note:

For more information about distributions, see Understanding and Obtaining Product Distributions in *Planning an Installation of Oracle Fusion Middleware*.

Installing the Oracle GoldenGate Studio Software

This section describes how to install the Oracle GoldenGate Studio software.

Before beginning the installation, ensure that you have verified your system environment ([Roadmap for Verifying Your System Environment](#)).

By the end of this section, you will have installed Oracle GoldenGate Studio.

Verifying the Installation Checklist

The installation process requires specific information from you.

Starting the Installation Program

Before running the installation, you must verify the JDK and required software.

Navigating the Installation Screens

The installer shows a series of screens where you verify or enter information.

Verifying the Installation

After you complete the installation, verify it was successful by completing a series of tasks.

2.1 Verifying the Installation Checklist

The installation process requires specific information from you.

[Table 2-1](#) lists important items that you must know before, or decide during, Oracle GoldenGate Studio installation.

Table 2-1 Installation Checklist

Information	Example Value	Description
<code>JAVA_HOME</code>	<code>/home/Oracle/Java/ jdk1.8.0_77</code>	Environment variable that points to the Java JDK home directory.
Database host name	<code>examplehost.exampledomain</code>	Name and domain of the host where the database is running.
Database port	1521	Port number that the database listens on. The default Oracle database listen port is 1521.

Table 2-1 (Cont.) Installation Checklist

Information	Example Value	Description
Database service name	orcl	Oracle databases require a unique service name. The default service name is orcl.
DBA user name	SYS	Name of user with database administration privileges. The default DBA user on Oracle databases is SYS.
DBA password	ExamplePassword1	Password of the user with database administration privileges.
<i>ORACLE_HOME</i>	/home/Oracle/product/ ORACLE_HOME	Directory you will install your software in. This directory will include Oracle GoldenGate Studio.
RCU utility	<i>ORACLE_HOME</i> / oracle_common/bin	Path to the Repository Creation Utility (RCU).
RCU schema prefix	DEV	Prefix for names of database schema used by Oracle GoldenGate Studio.
RCU schema password	ExamplePassword1	Password for the database schema used by Oracle GoldenGate Studio.

2.2 Starting the Installation Program

Before running the installation, you must verify the JDK and required software.

To start the installation program:

1. Log in to the target system.
2. Verify that a certified JDK already exists on your system. The installer requires a certified JDK. See the appropriate certification document on the *Oracle Fusion Middleware Supported System Configurations* page.
3. Verify that you have installed all prerequisite software.
4. Go to the directory where you downloaded the installation program.
5. Launch the installation program by running the `java` executable from the JDK directory on your system:
 - On UNIX operating systems: `/home/Oracle/Java/jdk1.8.0_77/bin/java -jar fmw_12.2.1.1.0_oggstudio_generic.jar`

- On Windows operating systems: `C:\home\Oracle\Java\jdk1.8.0_77\bin\java -jar fmw_12.2.1.1.0_oggstudio_generic.jar`

Be sure to replace the JDK location in these examples with the actual JDK location on your system.

Note:

You can also launch the installer in silent mode to ensure that configuration options do not appear during the installation process. For more about silent or command line installation, see Using the Oracle Universal Installer in Silent Mode in *Installing Software with the Oracle Universal Installer*.

When the installation program appears, you are ready to begin the installation. See the next topic for a description of each installation program screen.

2.3 Navigating the Installation Screens

The installer shows a series of screens where you verify or enter information.

The following table lists the order in which installer screens appear. If you need additional help with an installation screen, click the screen name. You can also click **Help** on the installation screens for additional instructions.

Table 2-2 Oracle GoldenGate Studio Install Screens

Screen	Description
Installation Inventory Setup	<p>On UNIX operating systems, this screen opens if this is the first time you are installing any Oracle product on this host. Specify the location where you want to create your central inventory. Make sure that the operating system group name selected on this screen has write permissions to the central inventory location.</p> <p>For more about the central inventory, see Understanding the Oracle Central Inventory in <i>Installing Software with the Oracle Universal Installer</i>.</p> <p>This screen does not appear on Windows operating systems.</p>
Welcome	This screen introduces you to the product installer.
Auto Updates	Use this screen to search for the latest software updates, including important security updates, via your My Oracle Support account.

Table 2-2 (Cont.) Oracle GoldenGate Studio Install Screens

Screen	Description
Installation Location	<p>Use this screen to specify your Oracle home directory location. The Oracle home location you specify on this screen should be a new, empty directory.</p> <p>You can click View to verify and ensure that you are installing Oracle GoldenGate Studio in the correct Oracle home.</p> <p>For more about Oracle Fusion Middleware directory structure, see Understanding Directories for Installation and Configuration in <i>Planning an Installation of Oracle Fusion Middleware</i>.</p>
Installation Type	<p>Use this screen to select the installation type and consequently, the products and feature sets you want to install. Complete Install is the only installation type for Oracle GoldenGate Studio. This option is already selected by default.</p>
Prerequisite Checks	<p>Verify that your system meets the minimum necessary requirements.</p> <p>To view the list of tasks that get verified, select View Successful Tasks. To view log details, select View Log.</p> <p>If there are warning or error messages, see one of the documents in Roadmap for Verifying Your System Environment.</p>
Installation Summary	<p>Use this screen to verify installation options you selected. If you want to save these options to a response file, click Save Response File and enter the response file location and name. You can use response files later if you perform a silent installation.</p> <p>All feature sets that are installed after installation is complete are listed here.</p> <p>For more about silent or command line installation, see Using the Oracle Universal Installer in Silent Mode in <i>Installing Software with the Oracle Universal Installer</i>.</p> <p>Click Install to begin the installation.</p>
Installation Progress	<p>This screen shows the installation progress.</p> <p>When the progress bar reaches 100% complete, click Finish to dismiss the installer or click Next to see a summary.</p>
Installation Complete	<p>Review the summary information on this screen, then click Finish to dismiss the installer.</p>

After installing the software, you should be able to start Oracle GoldenGate Studio from the `ORACLE_HOME/oggstudio/bin` directory. However, at this point, you will not be able to use the product. You must first create the repository using the Repository Creation Utility (RCU).

For more information on how to start Oracle GoldenGate Studio, see [Starting Oracle GoldenGate Studio](#).

2.4 Verifying the Installation

After you complete the installation, verify it was successful by completing a series of tasks.

Reviewing the Installation Log Files

Review the contents of the installation log files to make sure that the installer did not encounter any problems.

Checking the Directory Structure

The contents of your installation vary based on the options you selected during the installation.

Viewing the Contents of the Oracle Home

You can view the contents of the Oracle home using the `viewInventory` script.

2.4.1 Reviewing the Installation Log Files

Review the contents of the installation log files to make sure that the installer did not encounter any problems.

By default, the installer writes logs files to the *Oracle_Inventory_Location/logs* (on UNIX operating systems) or *Oracle_Inventory_Location\logs* (on Windows operating systems) directory.

For a description of the log files and where to find them, see *Installation Log Files* in *Installing Software with the Oracle Universal Installer*.

2.4.2 Checking the Directory Structure

The contents of your installation vary based on the options you selected during the installation.

For more information about the directory structure after installation, see *What are the Key Oracle Fusion Middleware Directories?* in *Understanding Oracle Fusion Middleware*.

2.4.3 Viewing the Contents of the Oracle Home

You can view the contents of the Oracle home using the `viewInventory` script.

For more information, see *Viewing the Contents of an Oracle Home* in *Installing Software with the Oracle Universal Installer*.

Creating the Oracle GoldenGate Studio Repository Schema

The repository for Oracle GoldenGate Studio contains all of the replication design and deployment details. Therefore, you must install the repository schema on a certified database before using Oracle GoldenGate Studio. The repository is created using the Oracle Repository Creation Utility (RCU).

Before you begin creating the schema, ensure that you have completed installing the Oracle GoldenGate Studio software in a new, empty Oracle home. For more information, see [Installing the Oracle GoldenGate Studio Software](#).

Follow the instructions in this section to install the schema:

[Installing and Configuring a Certified Database](#)

You must verify that you installed and configured a certified database, and that the database is up and running.

[Starting the Repository Creation Utility \(RCU\)](#)

Starting RCU requires that your JDK environment variable is set correctly.

[Navigating the RCU Screens to Create the Schemas](#)

Use the RCU screens to create the database schemas.

[Verifying the Installation](#)

After completing the installation steps, you should verify that Oracle GoldenGate Studio is properly installed.

3.1 Installing and Configuring a Certified Database

You must verify that you installed and configured a certified database, and that the database is up and running.

For more information, see *Installing a Database and Database Schemas in Planning an Installation of Oracle Fusion Middleware*.

3.2 Starting the Repository Creation Utility (RCU)

Starting RCU requires that your JDK environment variable is set correctly.

To start the Repository Creation Utility (RCU):

1. Navigate to the `ORACLE_HOME/oracle_common/bin` directory on your system.
2. Ensure that the `JAVA_HOME` environment variable is set to the location of a certified JDK on your system. The location should be up to but not including the `bin` directory. For example, if your JDK is located in `/home/Oracle/Java/`:

On UNIX operating systems (in C shell):

```
setenv JAVA_HOME /home/Oracle/Java/jdk1.8.0_77
```

On Windows operating systems:

```
set JAVA_HOME=C:\home\Oracle\Java\jdk1.8.0_77
```

Be sure to replace the JDK location in these examples with the actual JDK location on your system.

3. Start RCU from the *ORACLE_HOME*/oracle_common/bin directory:

On UNIX operating systems:

```
./rcu
```

On Microsoft Windows operating systems:

```
rcu.bat
```

3.3 Navigating the RCU Screens to Create the Schemas

Use the RCU screens to create the database schemas.

Introducing RCU

The Welcome screen is the first screen that appears when you start RCU.

Selecting a Method of Schema Creation

Use the Create Repository screen to select a method to create and load component schemas into the database.

Providing Database Connection Details

On the Database Connection Details screen, provide the database connection details for RCU to connect to your database.

Specifying a Custom Prefix and Selecting the Oracle GoldenGate Repository Schema

On the Select Components screen, select **Create new prefix**, specify a custom prefix, then select the **Oracle GoldenGate — Repository** schema.

Specifying Schema Passwords

Use the Schema Passwords screen to specify how you want to set the schema passwords on your database, then specify and confirm your passwords.

Specifying Custom Variables

Use the Custom Variables screen to specify a password for the supervisor user and to select the encryption algorithm for the Oracle GoldenGate Studio Repository schema.

Completing Schema Creation

Navigate through the remaining RCU screens to complete schema creation.

3.3.1 Introducing RCU

The Welcome screen is the first screen that appears when you start RCU.

Click **Next**.

3.3.2 Selecting a Method of Schema Creation

Use the Create Repository screen to select a method to create and load component schemas into the database.

On the Create Repository screen:

- If you have the necessary permission and privileges to perform DBA activities on your database, select **System Load and Product Load**. This procedure assumes that you have SYSDBA privileges.
- If you do *not* have the necessary permission or privileges to perform DBA activities in the database, you must select **Prepare Scripts for System Load** on this screen. This option generates a SQL script that you can give to your database administrator. See Understanding System Load and Product Load in *Creating Schemas with the Repository Creation Utility*.
- If the DBA has already run the SQL script for System Load, select **Perform Product Load**.

3.3.3 Providing Database Connection Details

On the Database Connection Details screen, provide the database connection details for RCU to connect to your database.

Click **Next** to proceed, then click **OK** on the dialog window to confirm that connection to the database was successful.

3.3.4 Specifying a Custom Prefix and Selecting the Oracle GoldenGate Repository Schema

On the Select Components screen, select **Create new prefix**, specify a custom prefix, then select the **Oracle GoldenGate — Repository** schema.

The schema Common Infrastructure Services is also automatically created. This schema is dimmed; you cannot select or deselect it. For more information, see Understanding the Service Table Schema in *Creating Schemas with the Repository Creation Utility*.

The custom prefix is used to logically group schemas together. Note that a prefix is required.

Tip:

For more information about custom prefixes, see Understanding Custom Prefixes in *Creating Schemas with the Repository Creation Utility*.

For more information about how schemas can be organized, see Planning Your Schema Creation in *Creating Schemas with the Repository Creation Utility*.

Specify a unique prefix for all schemas created in this session, so you can easily locate, reference, and manage the schemas later.

☐ Select existing prefix:

☒ Create new prefix:

Alpha numeric only. Cannot start with a number. No special characters.

Component	Schema Owner
<input type="checkbox"/> Oracle AS Repository Components	
<input checked="" type="checkbox"/> AS Common Schemas	
<input type="checkbox"/> User Messaging Service	UMS
<input type="checkbox"/> Metadata Services	MDS
<input type="checkbox"/> WebLogic Services	WLS
<input checked="" type="checkbox"/> Common Infrastructure Services	DEV_STB
<input type="checkbox"/> Oracle Platform Security Services	OPSS
<input type="checkbox"/> Audit Services	IAU
<input type="checkbox"/> Audit Services Append	IAU_APPEND
<input type="checkbox"/> Audit Services Viewer	IAU_VIEWER
<input checked="" type="checkbox"/> Oracle GoldenGate	
<input checked="" type="checkbox"/> Repository	DEV_OGGSTUDIO_REPO

Tip:

You must make a note of the custom prefix you choose to enter here; you will need this later on.

Click **Next** to proceed, then click **OK** on the dialog window confirming that prerequisite checking for schema creation was successful.

3.3.5 Specifying Schema Passwords

Use the Schema Passwords screen to specify how you want to set the schema passwords on your database, then specify and confirm your passwords.

Tip:

You must make a note of the passwords you set on this screen; you will need them later on when providing your database connection information to connect to the repository after you start Oracle GoldenGate Studio.

3.3.6 Specifying Custom Variables

Use the Custom Variables screen to specify a password for the supervisor user and to select the encryption algorithm for the Oracle GoldenGate Studio Repository schema.

The custom variables for Oracle GoldenGate Studio are described in the following table:

Variable	Description
Supervisor Password	<p>Password of the supervisor user. You must confirm this password on the following line.</p> <p>You must enter a password for the Supervisor Password and Confirm Supervisor Password fields. These fields are required before you can continue. The password should be between 6 and 12 characters.</p> <p>Make a note of the password you set on this screen; you will need it later on when providing your Oracle GoldenGate Studio connection information to connect to the repository after you start Oracle GoldenGate Studio.</p>
Encryption Algorithm	<p>Select the encryption algorithm, AES-128.</p> <p>This field is optional. If this field is left blank, the default value is AES-128.</p>

Enter value for the following custom variables.

Component	Custom Variable	Value
Repository	Supervisor Password	
	Confirm Supervisor Password	
	Encryption Algorithm: AES-128 (Default...	

3.3.7 Completing Schema Creation

Navigate through the remaining RCU screens to complete schema creation.

On the Map Tablespaces screen, the Encrypt Tablespace check box appears *only* if you enabled TDE (Transparent Data Encryption) in the database (Oracle or Oracle EBR) when you start RCU. Select the **Encrypt Tablespace** check box if you want to encrypt all new tablespaces that RCU will create.

When you reach the Completion Summary screen, click **Close** to dismiss RCU.

3.4 Verifying the Installation

After completing the installation steps, you should verify that Oracle GoldenGate Studio is properly installed.

To verify that Oracle GoldenGate Studio is installed properly, see [Performing Oracle GoldenGate Studio Tasks](#). You should familiarize yourself with the tasks that this section describes and perform them to verify that Oracle GoldenGate Studio is properly installed.

Next Steps After Installing Oracle GoldenGate Studio

After installing the software and creating the Repository schema, there are additional tasks you might want to perform to get started working with Oracle GoldenGate Studio.

Starting Oracle GoldenGate Studio

After installing the software, you can start and access Oracle GoldenGate Studio from the `ORACLE_HOME/oggstudio/bin` directory.

Performing Oracle GoldenGate Studio Tasks

To get started, review these common tasks you will likely want to perform after installing Oracle GoldenGate Studio.

4.1 Starting Oracle GoldenGate Studio

After installing the software, you can start and access Oracle GoldenGate Studio from the `ORACLE_HOME/oggstudio/bin` directory.

To start Oracle GoldenGate Studio:

1. Change directory to the `ORACLE_HOME/oggstudio/bin` directory.

For example:

```
cd ORACLE_HOME/oggstudio/bin
```

2. Run the following command:

On Linux or UNIX:

```
./oggstudio
```

On Windows:

```
oggstudioW.exe
```

4.2 Performing Oracle GoldenGate Studio Tasks

To get started, review these common tasks you will likely want to perform after installing Oracle GoldenGate Studio.

Table 4-1 Basic Tasks for Oracle GoldenGate Studio

Task	More Information
Use wizards that provide pre-configured solution and deployment templates.	See Understanding Solutions in <i>Using Oracle GoldenGate Studio</i> .

Table 4-1 (Cont.) Basic Tasks for Oracle GoldenGate Studio

Task	More Information
Evolve solutions by dragging and dropping data servers and replication paths to the solution diagram.	See Working with Solutions and Deployment Profiles in <i>Using Oracle GoldenGate Studio</i> .
Define physical resources and assign them to your deployment profiles.	See Understanding Deployment Profiles in <i>Using Oracle GoldenGate Studio</i> .
Create multiple deployment profiles (for example, separate profiles for testing and production team) for a single solution.	See Understanding Deployment Profiles in <i>Using Oracle GoldenGate Studio</i> .
Use Automap or manually map, schema, table, and column mappings and assign to replication paths.	See Understanding Mapping Groups in <i>Using Oracle GoldenGate Studio</i> .
Reuse mappings in multiple replication paths and across different projects.	See Understanding Mapping Groups in <i>Using Oracle GoldenGate Studio</i> .
Add, remove, and fine tune any Oracle GoldenGate option or parameter.	See Using the Properties Inspector in <i>Using Oracle GoldenGate Studio</i> .
Generate parameter files and Oracle GoldenGate commands. Deploy them online to live Oracle GoldenGate instances or save them locally for manual deployment.	See Understanding Deployment Profiles in <i>Using Oracle GoldenGate Studio</i> .
Start, stop, and monitor all physical processes.	See Monitoring in <i>Using Oracle GoldenGate Studio</i> .
Monitor your solutions and view deployment history information.	See Understanding Deployment Profiles in <i>Using Oracle GoldenGate Studio</i> .
Export solutions and mappings to XML files that can be imported by other Oracle GoldenGate Studio users.	See Using the Projects Navigator in <i>Using Oracle GoldenGate Studio</i> .

Deinstalling or Reinstalling Oracle GoldenGate Studio

Follow the instructions in this section to deinstall or reinstall Oracle GoldenGate Studio.

Oracle recommends that you always use the instructions in this section to remove the software. If you try to remove the software manually, you may encounter problems when you try to reinstall the software again at a later time. Following the procedures in this section ensures that the software is properly removed.

Understanding Product Deinstallation

The Oracle Fusion Middleware deinstaller removes the software from the Oracle home directory that it starts from.

Stopping Oracle Fusion Middleware

Before running the deinstaller, Oracle recommends that you stop all servers and processes associated with the Oracle home you are going to remove.

Removing Your Database Schemas

Before you remove the Oracle home, Oracle recommends that you run Repository Creation Utility to remove the GoldenGate Studio Repository schema associated with this installation.

Deinstalling the Software

Follow the instructions in this section to start the product deinstaller and remove the software.

Removing the Oracle Home Directory Manually

After deinstalling the software, you must manually remove your Oracle home directory and any existing subdirectories that the deinstaller did not remove.

Removing the Program Shortcuts on Windows Operating Systems

On Windows operating systems, you must also manually remove the program shortcuts; the deinstaller does not remove them for you.

Removing the Oracle GoldenGate Studio Cache Directory

Oracle GoldenGate Studio cache information should be manually removed; the deinstaller does not remove this information.

Reinstalling the Software

You can reinstall your software into the same Oracle home as a previous installation only if you deinstalled the software by following the

instructions in this section, including manually removing the Oracle home directory.

5.1 Understanding Product Deinstallation

The Oracle Fusion Middleware deinstaller removes the software from the Oracle home directory that it starts from.

[Table 5-1](#) summarizes the deinstallation procedure and links to supporting documentation.

Table 5-1 Roadmap for Product Deinstallation

Task	Description	Documentation
Stop Oracle Fusion Middleware	All servers and processes associated with the Oracle home should be stopped before running the deinstaller. Note that you should disconnect from the repository and close Oracle GoldenGate Studio.	See Stopping Oracle Fusion Middleware .
Remove your database schemas	Run Repository Creation Utility to remove your database schemas.	See Removing Your Database Schemas .
Remove the software	Run the product deinstaller to remove Oracle GoldenGate Studio. Note that if your Oracle home contains multiple products, you must run the deinstaller multiple times, once for each product.	See Deinstalling the Software .
Remove the Oracle home directory	The deinstaller does not remove all files and folders from the Oracle home directory. After the deinstaller is finished, you must manually remove the Oracle home to complete your product removal.	See Removing the Oracle Home Directory Manually .

5.2 Stopping Oracle Fusion Middleware

Before running the deinstaller, Oracle recommends that you stop all servers and processes associated with the Oracle home you are going to remove.

For more information, see *Stopping an Oracle Fusion Middleware Environment in Administering Oracle Fusion Middleware*.

5.3 Removing Your Database Schemas

Before you remove the Oracle home, Oracle recommends that you run Repository Creation Utility to remove the GoldenGate Studio Repository schema associated with this installation.

If there are multiple sets of schemas on your database, be sure to identify the schema prefix associated with the schema you are removing.

For schema removal steps, see *Dropping Schemas in Creating Schemas with the Repository Creation Utility*.

5.4 Deinstalling the Software

Follow the instructions in this section to start the product deinstaller and remove the software.

If you want to perform a silent (command-line) deinstallation, see *Running the Oracle Universal Installer for Silent Deinstallation* in *Installing Software with the Oracle Universal Installer*.

Starting the Deinstallation Program

You can start the deinstaller on either Unix or Windows.

Selecting the Product to Deinstall

Because multiple products might exist in the Oracle home, ensure that you are deinstalling the correct distribution.

Navigating the Deinstallation Screens

The deinstaller shows a series of screens to confirm the deinstallation of the software.

5.4.1 Starting the Deinstallation Program

You can start the deinstaller on either Unix or Windows.

To start the deinstaller:

- **On Unix**

Go to the `ORACLE_HOME/oui/bin` directory and enter the following command:

```
./deinstall.sh
```

- **On Windows**

Do one of the following:

- Use a file manager window to go to the `ORACLE_HOME\oui\bin` directory and double click on `deinstall.cmd`.
- From the command line, go to the `ORACLE_HOME\oui\bin` and enter the following command:

```
deinstall.cmd
```

- From the **Start** menu, select **All Programs**, then select **Oracle**, then select **OracleHome**, and then select **Uninstall Oracle Software**.

5.4.2 Selecting the Product to Deinstall

Because multiple products might exist in the Oracle home, ensure that you are deinstalling the correct distribution.

After you start the deinstaller, the Distribution to Uninstall screen appears only if more than one distribution is detected in the Oracle home from where the program is started. From the drop-down list, select **GG Studio 12.2.1.1.0** and click **Uninstall**. The deinstallation program shows the screens listed in [Navigating the Deinstallation Screens](#).

Note:

You will not encounter the Distribution to Uninstall screen if no other software is detected in the Oracle home.

5.4.3 Navigating the Deinstallation Screens

The deinstaller shows a series of screens to confirm the deinstallation of the software.

If you need more help with a deinstallation screen listed in [Table 5-2](#), click **Help** on the screen.

Table 5-2 Deinstallation Screens and Descriptions

Screen	Description
Welcome	This screen introduces you to the product deinstaller.
Deinstallation Summary	<p>This screen shows the Oracle home directory and its contents that will be deinstalled. Verify that this is the correct directory.</p> <p>If you want to save these options to a response file, click Save Response File and enter the response file location and name. You can use response file later during a silent deinstallation. For more on silent or command line deinstallation, see <i>Running the Oracle Universal Installer for Silent Deinstallation in Installing Software with the Oracle Universal Installer</i>.</p> <p>Click Deinstall to begin removing the software.</p>
Deinstallation Progress	Shows the deinstallation progress.
Deinstallation Complete	This screen appears when the deinstallation is complete. Review the information on this screen, then click Finish to dismiss the deinstaller.

5.5 Removing the Oracle Home Directory Manually

After deinstalling the software, you must manually remove your Oracle home directory and any existing subdirectories that the deinstaller did not remove.

For example, if your Oracle home directory is `/home/Oracle/product/ORACLE_HOME` on a UNIX operating system, enter the following commands:

```
cd /home/Oracle/product
rm -rf ORACLE_HOME
```

On a Windows operating system, if your Oracle home directory is `C:\Oracle\Product\ORACLE_HOME`, use a file manager window and navigate to the `C:\Oracle\Product` directory, then right-click on the `ORACLE_HOME` folder and select **Delete**.

5.6 Removing the Program Shortcuts on Windows Operating Systems

On Windows operating systems, you must also manually remove the program shortcuts; the deinstaller does not remove them for you.

Go to the `C:\ProgramData\Microsoft\Windows\Start Menu\Programs\Oracle\ORACLE_HOME\Product` directory. If you only have one product installed in your Oracle home, you can remove the `ORACLE_HOME` directory. If you have multiple products installed in your Oracle home, you must remove all products before removing `ORACLE_HOME`.

5.7 Removing the Oracle GoldenGate Studio Cache Directory

Oracle GoldenGate Studio cache information should be manually removed; the deinstaller does not remove this information.

By default, the Oracle GoldenGate Studio cache is stored in a directory inside the user's home directory. For example:

On Linux or UNIX:

```
/home/exampleuser/.oggstudio
```

On Windows:

```
C:\Users\exampleuser\AppData\Roaming\oggstudio
```

The binaries and user preferences are stored in this directory. As a result, if Oracle GoldenGate Studio is reinstalled on the same system by the same user, the binaries from a previous installation will be used unless this directory is manually removed.

5.8 Reinstalling the Software

You can reinstall your software into the same Oracle home as a previous installation only if you deinstalled the software by following the instructions in this section, including manually removing the Oracle home directory.

When you reinstall, you can then specify the same Oracle home as your previous installation.

Consider the following cases where the Oracle home is not empty:

- Installing in an existing Oracle home that contains the same feature sets.

The installer warns you that the Oracle home you specified during installation already contains the same software you are trying to install.

Your options are:

- Select a different installation type. In this case, only the feature sets that do not exist in the Oracle home directory are installed.
- Select a different Oracle home directory.

- Installing in an existing, non-empty Oracle home.

For example, suppose that you chose to create your Domain home or Application home somewhere inside your existing Oracle home. This data is not removed during the deinstallation process, so if you try to reinstall into the same Oracle home, the installer does not allow it. Your options are to:

1. Deinstall your software from the Oracle home (as this section describes) and then remove the Oracle home directory. After you deinstall the software and remove the Oracle home directory, you can reinstall and reuse the same Oracle home location. Any domain or application data that was in the Oracle home must be re-created.
2. Select a different Oracle home directory.
